Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
Applicant seeking a loan	Secure fast loan approval	Have limited credit history	Salaried with a stable income	Hopeful about loan approval

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (Bank Credit Officer)	A bank credit officer reviewing loan applications on a daily basis.	Quickly identify low-risk, creditworthy applicants and fast-track their approval.	I lack a reliable, instant tool to assess an applicant's likelihood of repayment.	Manually evaluating income, credit history, and employment details for every applicant is slow and inconsistent.	Overwhelmed by rising application volumes and pressured to avoid costly approval errors.
PS-2 (Loan Applicant)	A self-employed applicant with irregular income and no formal credit history.	Secure a loan for property or business needs.	I have no way to know in advance whether my profile meets the bank's risk criteria.	Credit decisions depend on a complex, non-transparent evaluation of many financial factors at once.	Anxious and uncertain about my real chances of loan approval.

F1

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-3 (Financial Analyst)	A financial analyst responsible for evaluating large volumes of loan applications.	Reduce non-performing assets and speed up the overall credit evaluation process.	Manually cross-checking every applicant against risk parameters for hundreds of cases is slow and error-prone.	The bank lacks an automated, data-driven system that flags high-risk applicants at scale.	Stretched thin, and worried that risky loans could slip through manual review.
