

Project Executable Files

Date	06 July 2026
Team ID	xxxxxx
Project Name	Smart Lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Smart Lender
|
+-- app.py
+-- requirements.txt
+-- loan_prediction.csv
+-- README.md
+-- rdf.pkl
|
+-- model/
|   |-- dt.pkl
|   |-- gb.pkl
|   |-- knn.pkl
+-- static/
|   +-- css/
|       |-- style.css
|
+-- templates/
|   |-- about.html
|   |-- contact.html
|   |-- home.html
|   |-- performance.html
|   |-- predict.html
|   |-- submit.html
|   |-- tips.html
|   |-- workflow.html
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smart-lender-loan-approval-prediction-pf6h.onrender.com
Login Credentials (Demo)	No Login Required
Platform / Hosting Provider	Render
Repository Link	https://github.com/puttasiri1/Smart-Lender-Loan-Approval-Prediction
Demo Video Link	https://drive.google.com/file/d/1GFFDYc9W16jXpf2i8SfsDkxvnUJLalbc/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Download or clone the project repository from GitHub.
2. Open the project folder in Visual Studio Code, PyCharm, or any Python IDE.
3. Install all required dependencies using the following command: `pip install -r requirements.txt`
4. Verify that all project files and folders are available, including: `templates/`, `static/`, `model/`, `app.py`
5. Start the Flask application by running: `python app.py`
6. Open a web browser and navigate to: `http://127.0.0.1:5000`
7. Access the Dashboard and navigate to the Prediction page.
8. Enter the required applicant details: Gender, Marital Status, Education, Employment Status, Income, Loan Amount, Loan Term, Credit History, Property Area.
9. Click the Predict button to generate the loan approval outcome.

Online Access

The application is also intended to be deployed online and accessible directly at your hosted URL (see Step 3 above).

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The prediction is based on a model trained on a limited historical dataset and may not represent all real-world lending scenarios with complete accuracy.	Can be improved by training on larger and more diverse applicant datasets.
2	The application currently uses fixed demo login credentials and does not support full user registration or password management.	Can be enhanced by integrating a secure database-based authentication system.
3	Free-tier hosting services may take 30–60 seconds to wake up after inactivity.	Wait for the application to initialize, or use a paid hosting plan for faster response times.
